Although, your health condition may impact your everyday life, do not let it define who you are. INDERAL (propranolol) is used alone or together with other medicines to treat high blood pressure (hypertension). High blood pressure adds to the workload of the heart and arteries. If it continues for a long time, the heart and arteries may not function properly. This can damage the blood vessels of the brain, heart, and kidneys, resulting in a stroke, heart failure, or kidney failure. Lowering blood pressure may reduce the risk of stroke and heart attacks. INDERAL (propranolol) is also used to treat severe chest pain (angina), migraine headaches, or hypertrophic subaortic stenosis (thickened heart muscle). This medicine may also be used to treat irregular heartbeats, tremors, or pheochromocytoma (adrenal gland tumor). It may also be used to reduce the risk of death in patients who have heart attacks. INDERAL (propranolol) oral solution is used to treat proliferating infantile hemangioma. This medicine is a beta-blocker. It works by affecting the response to nerve impulses in certain parts of the body, like the heart. As a result, the heart beats slower and decreases the blood pressure. When the blood pressure is lowered, the amount of blood and oxygen is increased to the heart. This medicine is available only with your doctors prescription. Thanks and may you have a good understanding about this drug INDERAL (propranolol). You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!
