

Beat Brain Disease With Smart Food: Food For Thought

Did you know that Alzheimers, Parkinsons, ALS and other forms of brain disease are the fastest-growing causes of death in the world? Did you know that food and water contamination are contributing to the epidemic? Misinformation and mismanagement are putting millions of people in harms way. Alzheimers disease alone is killing more than 50 million people now. Millions more will contract the disease this year, while just as many will go undiagnosed and misdiagnosed. The medical world is abandoning the majority and forcing them upon their families and communities with zero coverage and zero guidance. Targeted nutrition can help us fight off brain disease and treat the symptoms. Combine that knowledge with our roadmap of which foods to avoid and you have hope in your hands that you can put to work today. Pharmaceutical treatments are mostly ineffective, but nutritional therapy holds great promise for us on many levels. The nutritional guidance offered here also is beneficial to your overall health. It can help you avoid cancer, diabetes, heart disease and more. This book offers the most comprehensive and condensed overview of the global epidemic of neurodegenerative disease. It also explains what you need to know to beat it. Learn why brain disease is preventable, transmissible and treatable. This book will save lives and improve lives.
