

The Effects of Conflicted Investment Advice on Retirement Savings

Americans retirement income is derived from many sources, including Social Security, traditional pensions, employer-based retirement savings plans such as 401(k)s, and Individual Retirement Accounts (IRAs). While this landscape is familiar today, it reflects a dramatic change from the landscape 40 years ago. The share of working Americans covered by traditional pension plans which offer a guaranteed income stream in retirement has fallen sharply. Today, most workers participating in a retirement plan at work are covered by a defined contribution plan, such as a 401(k). Importantly, the income available in retirement from a defined contribution plan depends on both the amount initially saved and the return on those savings. The shift from traditional pensions to defined contribution plans raises important policy issues about investment responsibilities and the roles of individual households, employers, and investment advisers in ensuring the retirement security of Americans. Defined contribution plans and IRAs are intricately linked, as the overwhelming majority of money flowing into IRAs comes from rollovers from an employer-based retirement plan, not direct IRA contributions. Collectively, more than 40 million American families have savings of more than \$7 trillion in IRAs. More than 75 million families have an employer-based retirement plan, own an IRA, or both. Rollovers to IRAs exceeded \$300 billion in 2012 and are expected to increase steadily in the coming years. The decision whether to roll over ones assets into an IRA can be confusing and the set of financial products that can be held in an IRA is vast, including savings accounts, money market accounts, mutual funds, exchange-traded funds, individual stocks and bonds, and annuities. Selecting and managing IRA investments can be a challenging and time-consuming task,

frequently one of the most complex financial decisions in a persons life, and many Americans turn to professional advisers for assistance. However, financial advisers are often compensated through fees and commissions that depend on their clients actions. Such fee structures generate acute conflicts of interest: the best recommendation for the saver may not be the best recommendation for the advisers bottom line. This report examines the evidence on the cost of conflicted investment advice and its effects on Americans retirement savings, focusing on IRAs. Investment losses due to conflicted advice result from the incentives conflicted payments generate for financial advisers to steer savers into products or investment strategies that provide larger payments to the adviser but are not necessarily the best choice for the saver.
